

Stack Detective

Code:

```
#include <Arduino.h>

void level3()
{
    int c = 30;
    Serial.printf("Level 3 variable c address: %p\n", &c);
}

void level2()
{
    int b = 20;
    Serial.printf("Level 2 variable b address: %p\n", &b);
    level3();
}

void level1()
{
    int a = 10;
    Serial.printf("Level 1 variable a address: %p\n", &a);
    level2();
}

void setup()
{
    Serial.begin(115200);
    delay(1000);

    Serial.println("=== Stack Detective Experiment ===");
    level1();
}
```

```
}
```

```
void loop()
```

```
{
```

```
}
```

Observation Table:

Variable	Example Address
----------	-----------------

-----	-----
-------	-------

a	0x3FFB1F4C
---	------------

b	0x3FFB1F2C
---	------------

c	0x3FFB1F0C
---	------------
